1. Part 1: Design and implementation of database system

1.1. Requirement a:

1.1.1. Consulting with the client

- V: Hello, Ms Harbour. Please tell me what do you want from the system you want us to design.
- H: Greetings. I desire a system that emulates the feeling of buying from a market, like the old days.
- V: Can you be more specific? I don't think I quite follow.
- H: So, they should be able to simply visit the website, choose the item from a list of items from different manufacturers and delivery services, and simply be able to buy them. And the system will have to store the data of all parties like the requirement I gave you before.
- V: So, A simple system that requires no log in, integrating the manufacturer and delivery service name inside of the item properties, with delivery, customer and supplier having addresses.
- H: Yes, and moreover, the client can buy multiple items of the same type and multiple types, all in one order.
- V: I see. Is that all?
- H: I'm quite sure it is. Thank you.
- V: Thank you as well. I will get to work now.

1.1.2. Requirement Identification:

Functional:

- A system able to process and store the transaction of items and batch item purchase, then send the information of its client, including phone, name and address, to the Delivery service

- Allows the customer to pick the supplier through Supplier-based item sorting (there can be multiple items of the same supplier or one item of different suppliers). The system would allow the Supplier to update the stock of items available.
- Allows the system to store operable address and shipping information of the parties involved in simple and consistent format while seperating different audiences.

Non functional:

- Fast, simple, easy to manage.
- Allows partial user anonymity, making the buying experience simpler and less time consuming.

1.1.3. Identification

- Firstly, the three human entities are created first: Customer, Supplier and Delivery, each containing Name, Phone and Address properties.
- Afterwards, a Item Entity is created, containing Name, Description, Count (remaining), Cost and Manufacturer properties. The Item receives a Foreign Key of SupplierID in order to differentiate products that has multiple suppliers, and since a Supplier can have many different items, the relationship between Supplier and Item is One to Many.
- Finally, the Sale Entity is created in order to Manage sales, with links to the Item, Customer and Delivery entities in order to manage the different parts of the Sale. One Delivery service can have multiple Sales, but one Sale can not have multiple Delivery Service, same with Item and Customer, so the relationship between the three of them and Sale is One to Many. Moreover, the Sale entity has a Item Count property, indicating how many items of the kind has been brought.

1.2. Requirement b:

With the Identification of Entities done in the first requirement, the following is the initial ERD:

1.3. Requirement c:

- 0NF to 1NF: Atomize properties:
  - Example 1: Name property of Customer Table as one unit -> Seperated into 3 different properties: First Name, Second Name, Last Name, Address for Customer, Supplier and Delivery have to be atomized

- Example 2: Item Foreign Key of Sale Table -> Seperated into A different table: Receipt Table containing ItemID, SaleID Forein Keys and Item Count Property to allow the user to buy multiple different items in one sale.
- End result:
  - Customer:
    - CustomerID (INT Primary Key)
    - CustomerFirstName (VARCHAR)
    - CustomerSecondName (VARCHAR)
    - CustomerLastName (VARCHAR)
    - CustomerPhone (INT)
    - CustomerAddress (VARCHAR)
    - CustomerStreet (VARCHAR)
    - CustomerZip (VARCHAR)
    - CustomerCountry (VARCHAR)
    - CustomerRegion (VARCHAR)
    - CustomerCity (VARCHAR)
  - Delivery:
    - DeliveryID (INT Primary Key)
    - DeliveryName (VARCHAR)
    - DeliveryFirstName (VARCHAR)
    - DeliverySecondName (VARCHAR)
    - DeliveryLastName (VARCHAR)
    - DeliveryPhone (INT)
    - DeliveryAddress (VARCHAR)
    - DeliveryStreet (VARCHAR)
    - DeliveryZip (VARCHAR)
    - DeliveryCountry (VARCHAR)
    - DeliveryRegion (VARCHAR)
    - DeliveryCity (VARCHAR)
  - Supplier:
    - SupplierID (INT Primary Key)
    - SupplierName (VARCHAR)
    - SupplierFirstName (VARCHAR)
    - SupplierSecondName (VARCHAR)
    - SupplierLastName (VARCHAR)
    - SupplierPhone (INT)

        - SupplierAddress (VARCHAR)
        - SupplierStreet (VARCHAR)
        - SupplierZip (VARCHAR)
        - SupplierCountry (VARCHAR)
        - SupplierRegion (VARCHAR)
        - SupplierCity (VARCHAR)
    - Sale:
        - SaleID (INT Primary Key)
        - SaleDeliveryID (INT Foreign Key)
        - SaleCustomerID (INT Foreign Key)
    - Receipt:
        - ReceiptSaleID (INT Foreign Key)
        - ReceiptItemID (INT Foreign Key)
        - ReceiptItemCount (INT)
- 1NF to 2NF: Non-Key attribute must depend on every part of the primary Key
    - All values of the tables abide by the Normalization, namely the Receipt Table using compost Primary Key structure (two or more foreign keys to identify a table)
- 2NF to 3NF: Non-key attributes not depending on eachother
    - Addresses of three aforementioned tables are dependent on eachother and is not compact
    - Solution: Seperating Addresses into individual Address tables for 3 entities, pointing to a seperate Zip Code table, the Zip table containing values that can be determined from the zip code, and addresses contain the rest
        - Zip:
            - ZipCode (VARCHAR Primary Key)
            - Country (VARCHAR)
            - Region (VARCHAR)
            - City (VARCHAR)
        - CustomerAddress:
            - CustomerAddressID (INT Primary Key)
            - CustomerAddressStreet (INT Primary Key)
            - CustomerAddressStreetNum (INT Primary Key)
            - CustomerAddressZip (VARCHAR Foreign Key)
        - DeliveryAddress:
            - DeliveryAddressID (INT Primary Key)
            - DeliveryAddressStreet (INT Primary Key)
            - DeliveryAddressStreetNum (INT Primary Key)
            - DeliveryAddressZip (VARCHAR Foreign Key)
        - SupplierAddress:

    - SupplierAddressID (INT Primary Key)
    - SupplierAddressStreet (INT Primary Key)
    - SupplierAddressStreetNum (INT Primary Key)
    - SupplierAddressZip (VARCHAR Foreign Key)
  - Customer:
    - CustomerID (INT Primary Key)
    - CustomerFirstName (VARCHAR)
    - CustomerSecondName (VARCHAR)
    - CustomerLastName (VARCHAR)
    - CustomerPhone (INT)
    - CustomerAddressIDCode (INT Foreign Key)
  - Delivery:
    - DeliveryID (INT Primary Key)
    - DeliveryName (VARCHAR)
    - DeliveryFirstName (VARCHAR)
    - DeliverySecondName (VARCHAR)
    - DeliveryLastName (VARCHAR)
    - DeliveryPhone (INT)
    - DeliveryAddressIDCode (INT Foreign Key)
  - Supplier:
    - SupplierID (INT Primary Key)
    - SupplierName (VARCHAR)
    - SupplierFirstName (VARCHAR)
    - SupplierSecondName (VARCHAR)
    - SupplierLastName (VARCHAR)
    - SupplierPhone (INT)
    - SupplierAddressIDCode (INT Foreign Key)
